

OmniSell OS

One console for every creator income channel — built from Riyadh, for the GCC and beyond.

The thesis in one page.

A multi-tenant creator-commerce platform that tells the truth about what can and cannot be automated across POD, digital, and gig income — plus a consumer loyalty economy.

40+

Connectors mapped

12 live at GA, the rest quarantined until verified.

≤90s

Design → 5 channels

Tier A bulk publish benchmark.

5 tiers

Pricing plans

Free / Creator \$29 / Studio \$99 / Agency \$299 / Enterprise.

15%

KSA VAT

ZATCA Phase-2 e-invoicing wired in.

25k

Tenant target (12mo)

2M SKUs · 10M listings · 500k orders/mo.

~36 wks

Build to GA

10 phases + Phase 4.5 Points Economy.

01 / 04

Business Registration

Legal entity, licenses, bank account, and tax registration — KSA-first.

🕒 TIMELINE: WEEKS 1-4

🏢 KSA ENTITY SETUP

Pick the right entity first.

For a foreign-founder SaaS like OmniSell, the path of least friction is a **100% foreign-owned LLC under a MISA/SAGIA investment licence**. Saudi founders can incorporate directly at the Ministry of Commerce (MCR) without MISA. Either way, the entity must match your commercial activity codes — **software publishing + e-commerce intermediary services** — because ZATCA and bank KYC will reject vague descriptions.

📋 SETUP CHECKLIST

MISA investment licence	foreign founder	SAR 12,000	first year
MCR LLC registration	saudi founder	SAR 1,200 + SAR 500	publication
Commercial Registration (CR)		activity codes 6201 + 4791	
Chamber of commerce membership		~SAR 2,100/yr	
National Address registration			mandatory for ZATCA + banks

👤 Saudization (Nitaqat)

Hire 1 Saudi in first 6 months. Use TQBR (interim) channel while ramping. Budget SAR 6-8k/mo for first Saudi hire.

📍 Office address

Virtual office (~SAR 4-6k/yr) works for CR but MISA may ask for physical. Co-working desks in Riyadh Digital City or Malqa.

🔗 Government portals

Absher Business · Etimad · ZATCA invoice portal · GOSI · Qiwa. Open all in week 1.

TAX · COMPLIANCE · BANKING

Tax, compliance, and banking — close the loop before the first SAR.

Three regimes hit OmniSell on day one: ZATCA e-invoicing, VAT, and Saudi PDPL. Bank setup runs in parallel.

15%

VAT rate (KSA)

Register once revenue > SAR 375k mandatory; voluntary from SAR 40k. File quarterly via ZATCA portal.

Phase 2

ZATCA e-invoicing

Integration phase rolling in waves through 2026. OmniSell wires this in via `zatca_einvoicing` feature flag — enable per tenant after tax profile complete.

SAR 5M

Max PDPL fine / breach

Doubled for repeat offences. Enforced since Sep 2023. PII field-level encryption + 30-day DSAR SLA already in product scope.

±0.5%

Ledger reconciliation

Definition of Done for the Finance module vs provider statements on a 30-day sample.

BANKING STACK

Al Rajhi Bank

Primary SAR account, Mada acquiring, fastest ZATCA + VAT pulls.

Riyad Bank

USD/EUR inbound wire for international SaaS revenue.

Wise Business

Multi-currency rails for Stripe / Paddle inbound without forcing FX at Saudi rates.

02 / 04

TIMELINE: WEEKS 10-14

API Configuration

Connectors, auth flows, and the credential vault — the load-bearing product decision.

IN THIS SECTION

Connector tiers · First-4 integrations · Credential vault

Platforms are not interchangeable. The tier system tells the truth.

Every connector enters the registry with declared capabilities. Nothing is assumed.

A **TIER A**

Full API · self-serve · writes allowed

- Full automation: publish, sync orders, pull costs, fulfil.
- Examples
Printful, Printify, Gelato, Prodigy, Etsy, Shopify, WooCommerce, Gumroad, Paddle, Stripe
- Auth: OAuth 2.0 + PKCE or API key.

B **TIER B**

Approval-gated or partial API

- Auto where permitted; user supplies approved partner creds.
- Examples
Zazzle, Spring, Spreadshirt, Upwork, Freelancer
- Admin enables per tenant after partner proof.

C **TIER C**

No write API · ToS-restricted

- Export Pack only — ZIP + metadata.csv + checklist.
- Examples
Redbubble, Merch by Amazon, Society6, TeePublic, Threadless
- No code path may POST to a Tier-C platform. Enforced at type level.

D **TIER D**

Quarantined · dead or unverified

- Hidden from users.
status=UNVERIFIED.
- Examples
SunFrog, ViralStyle, Selz, Figure Eight + 40% of source list
- A connector ships only with
apiDocsUrl + tosUrl + verifiedBy.

 **Hard rule:** `connector.capabilities.canAutomate === false` → publishing UI renders Export Pack path only. There is no code path that POSTs to a Tier-C platform.

Ship Printful, Printify, Gelato, Prodigy first.

These four cover 80% of POD demand across NA, EU, GCC. They have stable APIs, real sandboxes, and write access — perfect GA launch cohort.

01

Printful

OAuth 2.0 · multi-tenant

Use OAuth not private token; private tokens are per-store and do not scale for SaaS.

02

Printify

Personal Access Token

Token is scoped to user shops; list shops first, then operate per `shopId`. Blueprint + provider + variant hierarchy is 3 levels deep.

03

Gelato

API key

Separate product/order/shipment surfaces. Global print routing needs destination country for shipping estimates.

04

Prodigi

API key · sandbox + live

Sandbox is genuinely usable. Build nightly contract tests against it in CI.

`typed api-client (openapi)`

🔑 Credential vault

- `AES-256-GCM` envelope encryption · per-tenant DEK wrapped by `KMS_MASTER_KEY`.
- Credentials never logged, never returned in any API response, never sent to browser or mobile.
- Only masked hints surface: `sk_live_...4821`.
- Token auto-refresh worker + expiry alerting.
- Rotating a key: `Connections → connection → Rotate`. Rotation audit event recorded.
- Cross-tenant read test must **FAIL** by design (Postgres RLS as second line of defence).

03 / 04

TIMELINE: WEEKS 6-9 + LAUNCH

Marketing Targets

Who buys, how we reach them, what we charge.

IN THIS SECTION
Personas · Positioning · Pricing ladder

Three personas, one product.

Each persona has a different job-to-be-done and a different price ceiling. The plan tier captures the willingness-to-pay difference.

Layla — Solo Creator • OWNER

Khobar, KSA

Upload art, publish wide, see net profit, get paid, file VAT.

Omar — Studio Manager • MANAGER

Riyadh

Assign designers, approve listings, monitor fulfilment SLAs.

Yusuf — Agency Analyst • ANALYST

Dubai + Riyadh

Read-only analytics across sub-accounts for 8+ creator clients.

studio reality

Positioning

- vs Etsy-only** OmniSell is the multi-channel operating system, not a single-channel storefront. Creators stop re-uploading the same design 8 times.
- vs Shopify-only** OmniSell does POD + digital + gig income, not just owned-storefront. The Tax Centre handles VAT/OSS/US nexus/KSA ZATCA — Shopify apps cover one slice.

PRICING LADDER

Free	\$0	1 seat / 3 ch / 25 SKU	
Creator	\$29/mo	2 seats / 10 ch / 500 SKU	
Studio	\$99/mo	8 seats / unlimited ch / 5k SKU	
Agency	\$299/mo	25 seats / white-label / SSO	10 / 15

04 / 04

Investment & Customers

Where the money goes, where the customers come from, how they stay.

A SAR 2.4M pre-seed buys 18 months of runway.

Anchor: 1 tech lead + 2 BE + 2 FE + 1 mobile + 1 designer + 0.5 QA + 0.5 PM. Solo-founder mode reads the week counts ×3 and cuts Phases 8–9 to post-GA.

SAR 2.4M

Pre-seed ask

~USD 640k. SAFE or priced round. Target close by end of Phase 0.

18 mo

Runway target

Includes 3 months of buffer. Burn ~SAR 130k/mo (team + infra + connectors).

35%

Free→paid conversion

Target by month 6 (BRB goal G4). Means ~440 paying tenants at month 6 if we hit 1,250 signups.

SAR 3.1

Blended CAC cap

Implied from LTV of ~SAR 1.4k @ 9-mo gross retention 80% on Creator plan.

USE OF FUNDS

BUILD 60% · GTM 25% · OPS 15%

<> Build (60%)

Engineering salaries · 8 FTE	SAR 1.45M
Infra: AWS ME + EU	SAR 145k
Connector sandbox + contract CI	SAR 65k

📣 Go-to-market (25%)

Content + SEO + Arabic creator community	SAR 380k
Partnership BD (KSA + UAE agencies)	SAR 145k
Paid pilot for 50 design seats	SAR 80k

OPS + RESERVE · 15% SAR 360k — legal, audit, KMS, Sentry, Stripe fees, 6-mo runway buffer.

Valuation anchor: SAR 12M post-money (~5x revenue multiple on Year-1 ARR target of SAR 2.4M).

Three motions. One flywheel.

PLG free tier gets creators in. Outbound lands agencies. Points economy turns every shopper into an earner — and every earner into a discount-led buyer.

GTM MOTIONS

PLG self-serve INBOUND · FREE → PAID	CHANNELS TikTok creator walkthroughs, Product Hunt, Arabic YouTube	GOAL 1,250 free signups by month 4, 440 paid by month 6.
Outbound to agencies DIRECT · STUDIO / AGENCY	CHANNELS LinkedIn + warm intros, 30 Riyadh/Dubai agency DMs/wk	GOAL 8 Studio + 3 Agency logos by month 9.
Partnerships CO-MARKETED · CHANNEL	CHANNELS Printful partner programme, KSA design schools, Aramco entrepreneurship	GOAL 2 co-marketed launches, 1 white-label lead by month 12.

THE POINTS FLYWHEEL

Closed-loop loyalty currency

- 1 Creator uploads VideoContent to their tenant (product demo, behind-the-scenes, drops).
- 2 Consumer watches ≥30s (server-verified heartbeat, no autoplay), earns points (cap 500/day, 10 watches/day).
- 3 Consumer redeems points at checkout for currency discount. Discount is a first-class order line + ledger entry.

Points ≠ money. Closed-loop loyalty currency, never directly purchasable. Conversion rate configurable per tenant. Fraud rules enforced (multi-account, device fingerprint, IP velocity).

Your first 90 days — the operating plan.

Time allocation, the things only the founder can do, and what to delegate first.

PHASE 01 · INCORPORATE Set up the company Days 1-30  Incorporate: MISA licence + CR + chamber + National Address. Open Al Rajhi + Riyadh Bank accounts.  ZATCA Phase 2 registration + VAT number. Pick fiscal year. File first zero-return.  Open MISA + Qiwa + GOSI + Absher Business portals. Hire your first Saudi in TQBR channel.  Buy KMS + Sentry + Stripe + Paddle. Generate JWT_ACCESS_SECRET + JWT_REFRESH_SECRET (32+ random bytes each, different).	PHASE 02 · BUILD Ship Phase 0-2 Days 31-60  Boot the monorepo: pnpm dev runs API + web + admin + Expo against Dockerised Postgres/Redis/MinIO.  Recruit 2 backend + 1 frontend contractor. Add a part-time designer. Add a finance ops volunteer.  Verify the first 4 connectors live: Printful, Printify, Gelato, Prodigy. Run \$7 verification protocol for each.  Buy omnisell.com + omnisell.sa + Arabic transliteration. Set up Google Workspace + domain email.	PHASE 03 · GTM + RAISE Go to market & raise Days 61-90  Launch private beta to 25 creators from your warm network. Run weekly office hours in Arabic + English.  Start content engine: 2 YouTube walkthroughs/wk in Arabic, 1 case study/mo in English.  Open pre-seed conversations with 8 angels + 2 KSA-focused funds. Use SAFE for first SAR 600k.  Weekly metrics review: signup→publish time, free→paid conversion, connector health, connector error budget burn.
 FOUNDER SALARY SAR 0 for first 6 mo, then SAR 8-12k/mo	 DELEGATE L1 bookkeeping · contract review · customer support	 NEVER DELEGATE hiring · vision · customer interviews

Build the operating system creators deserve.

Truth over theatre. **Money as integers**. Arabic from line one. Accessibility as a build gate. No code path that automates a Tier-C platform.

PRINCIPLES

Non-negotiables

- ✓ Multi-tenancy enforced in the data layer (RLS) — not the controller.
- ✓ Money is integer minor units + ISO-4217 currency. Never a float.
- ✓ i18n EN + AR with full RTL mirroring from day one.
- ✓ Accessibility: WCAG 2.2 AA, axe in CI, contrast $\geq 4.5:1$.
- ✓ Idempotency-Key on every mutating endpoint. Inbound webhooks deduped.
- ✓ Every mutation emits an audit event.

ACTION PLAN

Next 14 days

- 1 Book MISA appointment (`wc.tamm.sa`) for this week.
- 2 Reserve `omnisell.com` + `omnisell.sa` via Google Domains / SaudiNIC.
- 3 Open AI Rajhi Business account (online pre-form takes 20 min).
- 4 File CR with activity codes 6201 + 4791.
- 5 Kick off Phase 0 build: `docker compose up -d`, `pnpm dev` boots clean.
- 6 Send first 5 investor updates with this deck attached.
